## Term

## Objectives

The objective of the product is to provide a periodic coupon, which is conditional on the value of the Reference Rate. It is possible for the product to be automatically redeemed early based on pre-defined conditions. Your capital will be fully at risk when investing in this product.

**Range Accrual Coupon:**

- N is the total number of business days in the Observation Period.

An Observation Period corresponds to 6 months and extends from (and including) a Valuation Date to (and excluding) the following Valuation Date.

There are five Observation Periods.

**Automatic Early Redemption:**

**Final Redemption:**

On the Maturity Date, if the level of the Reference Rate is at or above the Final Barrier, you will receive 100% of the Nominal Value converted in HUF at Predetermined Exchange Rate. In this scenario, you will suffer a loss that can be partial or total.

Otherwise, you will receive : 100% of the Nominal Value in EUR.

## Intended Retail Investor

The product is aimed at investors who:

- have specific knowledge or experience of investing in similar products and in financial markets, and have the ability to understand the product and its risks and rewards.
- are able to bear a total loss of their investment and any potential return in case of default of the guarantor or issuer.
- seek a product offering capital growth and have an investment horizon in line with the recommended holding period stated below.
- are willing to accept a level of risk to achieve a potential return that is consistent with the summary risk indicator shown below.

## WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN?

### Summary Risk Indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class.

This rates the potential losses from future performance at a medium-low level, and poor market conditions are very unlikely to impact our capacity to pay you.

**Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.**

This product does not include any protection from future market performance so you could lose some or all of your investment.

If we are not able to pay you what is owed, you could lose your entire investment.

**Inflation Risk :** if the current economic situation characterized by high inflation persisted throughout the life time of the product, then the "real" return of the product, equal to its return minus the inflation rate, might be negative.

### Performance Scenarios

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The scenarios shown are illustrations based on results from the past and on certain assumptions. Market could develop very differently in the future.

## WHAT ARE THE COSTS?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over Time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

The duration of this product is uncertain as it may terminate at different times depending on how the market evolves. The amounts shown here consider two different scenarios (early call and maturity). In case you decide to exit before the product ends, exit costs may apply in addition to the amounts shown here.

We have assumed:

- EUR 10,000 is invested

- a performance of the product that is consistent with each holding period shown.

	If the product is called at the first possible date 25/09/2024	If the product reaches maturity
<b>Total costs</b>	EUR 343	EUR 343

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at maturity your average return per year is projected to be 3.4% before costs and 2.0% after costs.

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.

### Composition of Costs
