

Guidance on decimal changes for K&H GO&DEAL application

Reasons and details of the changes

K&H Bank's online FX Trading program is under continuous development, our aim is to constantly innovate and enhance the user experience. As a next step, we will transparently **increase the number of decimals used in the application for several currency pairs**. **For the two most frequently traded currency pairs (EUR/HUF and USD/HUF), no changes will be made for the time being. The changes will not affect the way you do business, you can do business in K&H Go&Deal in the same way as before.**

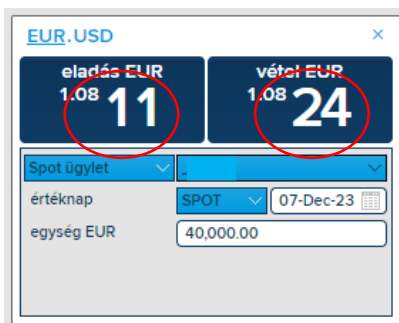

The increase in the number of decimals used in the exchange rates, applies mainly to special currency pairs in HUF (e.g. NOK/HUF, SEK/HUF, RON/HUF), while in non HUF relation, it also applies to more common currency pairs (e.g. EUR/USD). The change will affect all maturity transactions in K&H Go&Deal. The number of decimal places quoted may vary depending on the currency pair.

Below are some examples to illustrate the practical effects of the change:

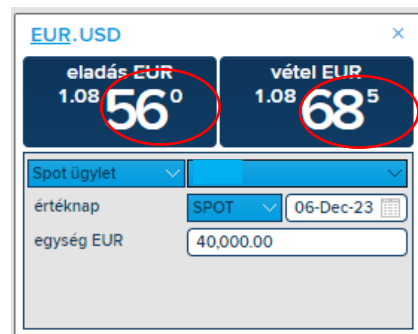

Example1: EUR/USD

For non-forint currency pairs, the number of decimal places in the spot rate has typically increased, as in the case of EUR/USD, which will now be quoted with 5 decimal places instead of 4.

Current:

New:

Example2: NOK/HUF

For the less frequently traded forint pairs, the number of decimals in the Spot rate has also been increased, such as RON/HUF, SEK/HUF, NOK/HUF, where the Spot rate will now show 4 decimal places.
